PEST CONTROL – CVH SPIRITS

Dear Alessandra,

I would like to confirm that all of Excel Environmental Services staff are aware your company are working to the Organic Standards and BRC Global Standards for food and food associated premises.

Only insecticides based on natural Pyrethrins to be used in food production and storage areas,

i.e. Pybuthrin 2/16, Pybuthrin 33, and Aquapy.

Rodenticide to be used in tamper resistant bait boxes (the usual non-spill formulation suitable for food areas).

Yours sincerely

Laura Wright
